

UNIVERSAL CYLINDER SYSTEM

Application:

Be able to use your key in any PACLOCK; Solid Body or Laminated. The Universal Cylinder System (UCS) gives the user the ultimate ability to customize your security solution. For lower security areas, go with a laminated PACLOCK. For higher security needs, go with a solid body PACLOCK. With UCS you can use the same key to open either lock!

This innovative cylinder system lets you key into any of our PACLOCK's. You can key them alike (KA), Master Key (MK), or even Grand Master Key (GMK).

Use the same key for all styles of PACLOCKS!

With UCS, you can Grand-Master Key your laminated padlocks into the same system as your hockey-pucks!

Upgrade to a restricted keyway and you can be sure that you control key duplication.

Cylinders with the "U" stamping comply with the "UCS" specifications
